The Contractor further warrants that it shall perform all services under this contract in a safe, efficient expeditious and lawful manner using industry-accepted practices in full compliance with all applicable New Hampshire and Federal laws and regulations.

## **WORK PLAN**

The following plan describes how the Town of Salem proposes to handle the household hazardous waste cleanup activities on the cleanup day.

### **MATERIAL FLOW**

As a homeowner arrives at the designated facility, posted signs shall direct him to the reception area. At that point, Town representatives shall meet the incoming vehicle and elicit general information from the participant (e.g., Town of residence, types and amounts of wastes brought to the facility.)

The participant then drives to the collection area where the waste material shall be removed from the vehicle and taken to the handling tables by Contractor representatives. At this point, the Contractor takes custody of the waste. Once removed, the participant will be directed toward the exit. An information booth shall be set up near the exit where the participant can park, fill out a questionnaire, and obtain information on waste disposal, household hazardous wastes, health effects, etc.

In the event that a participant exceeds the amount of waste allotted for disposal (10 gallons or approximately 30 pounds), the Owner's project manager shall be so advised. The excessive waste shall be accepted per the authority of the Owner's Project Manager.

The waste will be removed from the participant's vehicle by the Contractor's representative and shall be handed over the "hot line" along with its accompanying information sheet.

The Contractor shall segregate known wastes from unknown wastes. Separate tables shall be used. Known waste shall be transferred from its table to one of three repackaging tables: solvents, corrosives, and pesticides and/or poisons. The Contractor's personnel shall man those tables, repack the waste as necessary, record information about those wastes for manifest purposes and containerize the wastes in 55-gallon drums. The wastes shall be packaged on-site so that they may be properly disposed of, e.g., as lab packs, etc. All paints accepted shall be bulked on site.

Unknown wastes shall be transferred from the collection table to the analysis area by the Contractor. The Contractor shall conduct simple chemical analysis on these wastes to determine appropriate classification. Following classification, those wastes shall then be packaged at this location for transportation to an authorized hazardous waste facility.

Once the drum has been filled with waste, it shall be properly closed and transferred to the box trailer for storage. Manifests shall be initiated by the Contractor. Upon completion of the collections at the end of each day, the vehicle shall transport the wastes to an authorized treatment or disposal facility. No drums shall leave the site until, they are properly packaged.
