Salem 12334A – Salem Depot Buildings Demolition Project Bi-weekly Construction Update – July 31, 2020

Beginning on Thursday July 23, 2020 the Aulson Company, LLC began mobilizing for the demolition of 7 buildings, including various site features and underground storage tanks. The buildings are located at 4, 6, 10, 14, 22 and 28 S. Broadway and 1 N. Broadway adjacent to the intersection of NH Route 28 and NH Route 97. The project began with hazardous material removal from the building located at 4 S. Broadway. Hazardous materials include fluorescent light fixtures, thermostats, and emergency lighting batteries, as well as asbestos abatement on interior and exterior building materials. The asbestos abatement is achieved in accordance with Local and Federal requirements following containment regulations for both workers and the public. Inspections are done by visual means to ensure the materials have been removed. Air samples are taken to clear the building and surrounding area as safe for workers and the public. Once all the hazardous materials are removed from the building and the building deemed clean, razing of the structure will begin.
